01 · THE PROBLEM

Patients leave the visit with questions

We serve Spanish-speaking patients and families who need to revisit what the care team explained, in the language they prefer.

THE QUESTIONS THAT FOLLOW A VISIT

MY CARE

¿Qué me explicó el doctor?

What did the doctor explain?

APPOINTMENTS

¿Cuándo es mi próxima cita?

When is my next appointment?

GETTING THERE

¿Cómo llego sin transporte?

How do I get there without a ride?

Why it matters: patients can only follow a care plan they understand.

02 · THE SOLUTION

VozCare: revisit the visit in your language

A doctor workspace and a bilingual patient companion, connected by care-team review.

ES/EN

English and Spanish explanations

The visit explained again in the patient's preferred language.

3D

Visual anatomy

Reference anatomy shows the part of the body being discussed.

→

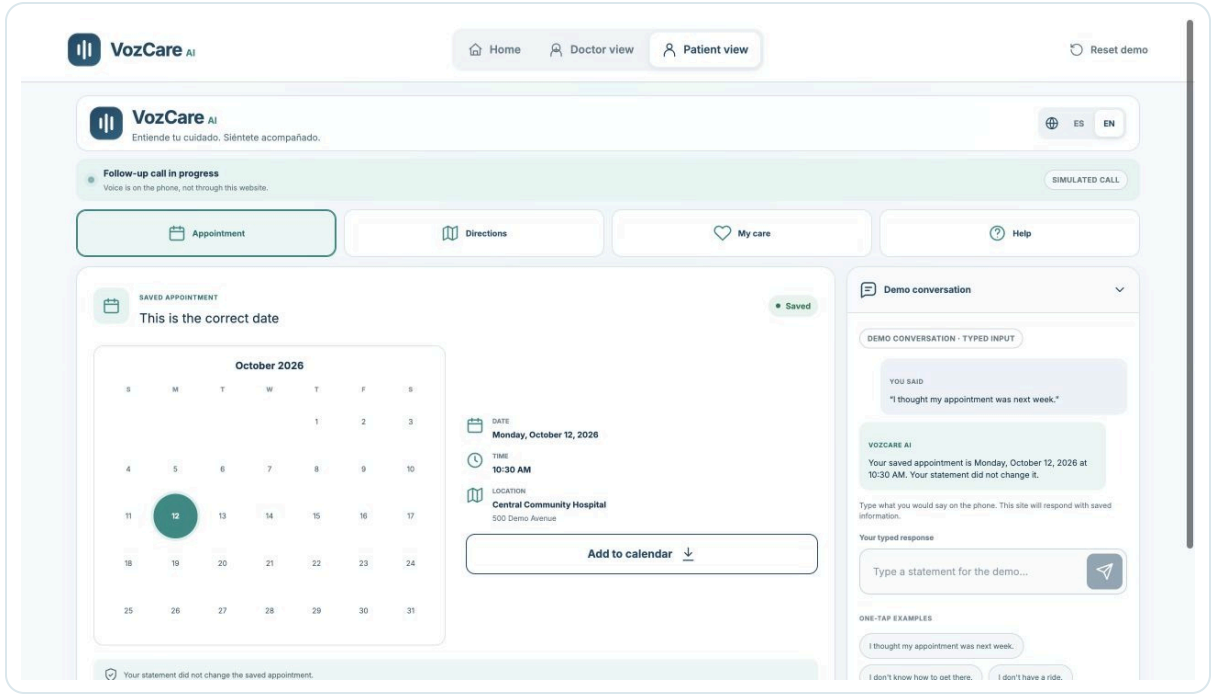

Clear next steps

Appointment, directions, and a way to ask for help, in one place.

✓

Care-team review before sharing

The care team checks wording, visuals, and links before a patient sees them.

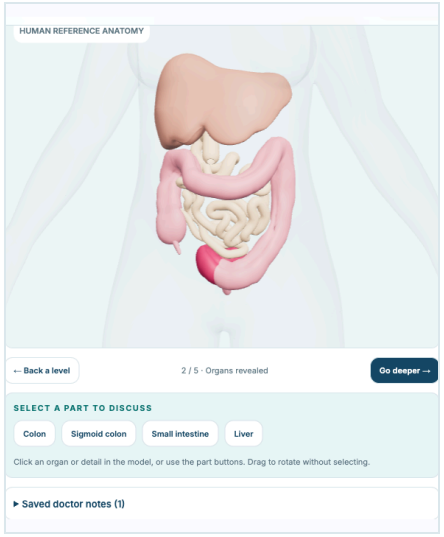

Patient companion, local prototype. The follow-up call shown is simulated; all data is fictional.

03 · MARÍA'S WALKTHROUGH

María's visit, explained in the doctor prototype

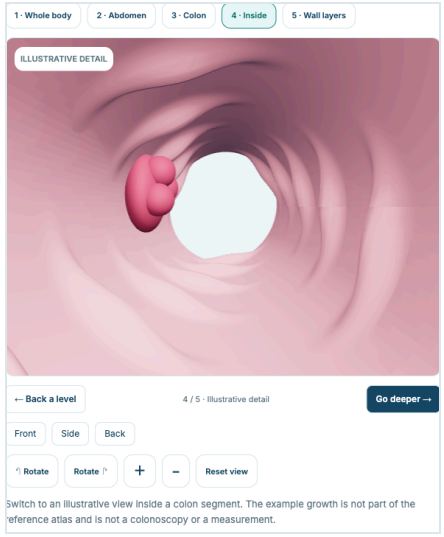

María is a fictional Spanish-speaking patient with sigmoid colon cancer. The anatomy is an educational illustration, not her scan. Screenshots are from the local prototype.

1 Select a part

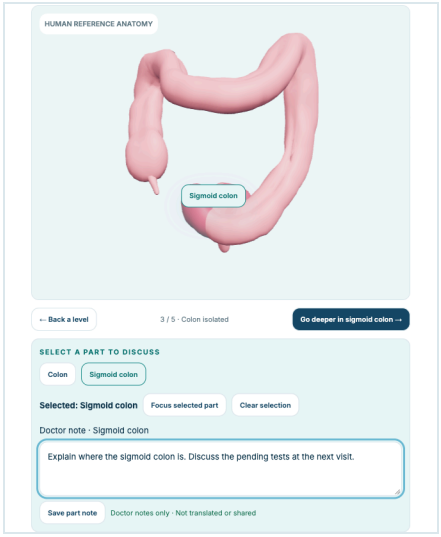

Click the abdomen, then pick the sigmoid colon.

2 Go deeper

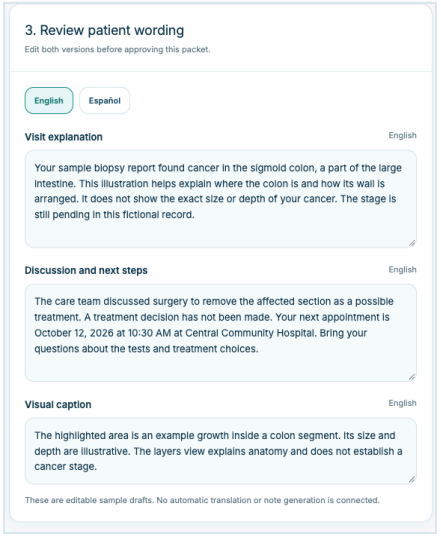

Move from the body to the colon to an illustrative inside view.

3 Attach a note

Save a doctor-only note linked to this exact view.

4 Review wording

Edit English and Spanish drafts; accept or reject reading links.

5 Preview packet

Check María's Spanish packet. Preview only; nothing is sent.

04 · WHAT WE BUILT

What we built, and what is still in progress

ARCHITECTURE

INTERFACE

React + TypeScript

Doctor workspace and bilingual patient companion. Vite + Tailwind CSS.

3D ANATOMY

Three.js

Human Reference Atlas anatomy plus illustrative inside views.

PLATFORM

Base44

Hosting, authentication, and data-access work.

Designed in Figma · public code on GitHub · fictional data only

STATUS

DEMONSTRATED · LOCAL PROTOTYPE

- Bilingual doctor and patient interface
- 3D anatomy: select a part and go deeper
- Doctor notes saved to a specific view
- English/Spanish wording and reading-link review
- Patient packet preview
- Simulated follow-up call and help requests

IN PROGRESS

- Hosted record access
- Final packet delivery

Base44 sign-in and data-access work is in the public code.

NOT VERIFIED

- Live calls and SMS
- Map navigation
- Automatic translation
- AI note generation
- Resource search

05 · TEAM AND NEXT STEPS

From prototype to a secure care loop

1 Secure record access

Server-authorized access to records.

2 Final packet approval

Lock the exact packet the team approved.

3 Patient links

Patient-specific links to that packet.

4 Persistent follow-up requests

Save ride, direction, and help requests.

5 Voice and SMS integration

Connect real follow-up calls and texts.

6 Clinical and bilingual review

Review with clinicians and bilingual practitioners.
